parasporal crystal protein cry9Cal [validated] - Bacillus thuringiensis
N,Alternate names: parasporal crystal protein cryIH
C,Specias: Bacillus thuringiensis
C,Date: 01-Dec-2000 #sequence\_revision 01-Dec-2000 #text\_change 09-Jul-2004
C,Accession: A59350; A94247
Appl. Environ. Microbiol. 62, 80-86, 1996
A,Filte: A Bacillus thuringiensis insecticidal crystal protein with a high activity again A,Reference number: A59350; MUID:96141404; PMID:857215
A,Accession: A59350
A,Rolecule type: DN.AA
A,Residues: 1-1157 \*LAA
A,Residues: 1-1157 \*LAA

A29125
A29126
Deparasporal crystal protein Bt2 - Bacillus thuringiensis subsp. kurstaki (strain HD-1)
C;Species: Bacillus thuringiensis subsp. kurstaki
C;Accession: A29125
C;Accession: A29125

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                           US-10-019-823B-58

Patent No. 5723758
GENERAL INFORMATION:

APPLICANT: Cannon, Raymond J.C.

APPLICANT: Cannon, Raymond J.C.

APPLICANT: Stelman, Steve

TITLE OF INVENTION: No. 5723758el Bacillus thuringiensis Isolate Denoted

TITLE OF INVENTION: Encoding Lepidopteran-Active Toxins

NUMBER OF SEQUENCES: 10

CORRESPONDENCE ADDRESS: 10

ADDRESSEE: David R. Saliwanchik

ADDRESSEE: David R. Saliwanchik

ADDRESSEE: David R. Saliwanchik
                                                                                                                                            309

Application US/08881340

Patent No. 5942658

GENERAL INFORMATION:

APPLICANT: Donovan, William P.

APPLICANT: Tan, Vuping

APPLICANT: Jany, Christine S.

APPLICANT: Gorzalez Jr., Jose M.

TITLE OF INVENTION: BACTLLUS THURINGIENSIS cryET4 AND cryET5

TITLE OF INVENTION: TOXIN GENES AND PROTEINS TOXIC TO LEPIDOPTERAN INSECTS

NUMBER OF SEQUENCES: 5

CORRESPONDENCE ADDRESS:

ADDRESSEE: Panitch Schwarze Jacobs & Nadel c/o A.S.

Pesticidial crystal protein cryllb (Insecticidal delta-endotoxin
Cryll(b)) (Crystaline entomocidal protoxin) (81 kDa crystal protein).
Names-ryllb, Synonyms=cryll(b), cryv, cryv465;
Bacillus thuringiensis (subgp. entomocidus).
Bacteria, Firmicutes; Bacillales; Bacillaceae; Bacillus.

Appl. Environ. Microbiol. 61:2402-2407(1995).
-!- FUNCTION: Promotes colloidosmotic lysis by binding to the midgut epithelial cells of certain coleopteran and lepidopteran species.
Active on Plutella xylostella but not on Bombyx mori.
-!- DEVELOPMENTAL STAGE: The crystal protein is produced during sporulation and is accumulated both as an inclusion and as part o
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        gene.";
Curr. Microbiol. 41:65-69(2000).
-!- FUNCTION: Promotes colloidosmotic lysis by binding to the midgut
-!- FUNCTION: Promotes colloidosmotic lysis by binding to the midgut
epithelial cells of many lepidopteran larvae. Active on Plutella
xylostella and on Bombyx mori.
-!- DEVELOPMENTAL STAGE: The crystal protein is produced during
sporulation and is accumulated both as an inclusion and as part
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    STRAIN=BR30;

Submitted (MAR-1998) to the EMBL/GenBank/DDBJ databases.
Submitted (MAR-1998) to the EMBL/GenBank/DDBJ databases.
--- FUNCTION: Promotes colloidosmotic lysis by binding to the midgut epithelial cells of insects.
--- EUNCELOPMENTAL STAGE: The crystal protein is produced during sporulation and is accumulated both as an inclusion and as part
